

SILICON RUBBER HEATER / HEATWELL

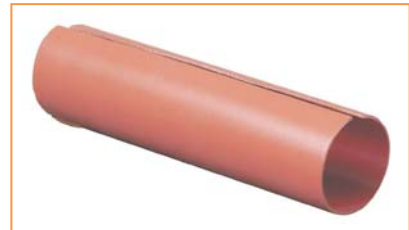

[FEATURES]

The silicon rubber heater is very thin and flexible sheet heater. The sheet consists of etched foils and wired elements resistance elements such as etched foil or wire elements sandwiched by silicon rubber sheets. And also, the sheets are reinforced by glass fiber and have excellent heat-resistance and durability.

Our HEATWELL, it has many options for sizes and shapes. Minimum size of this heater is 15 by 15 mm square, and maximum size is 1500 by 1500 mm square. We can add holes or cut-outs on this heater, and can make it to fit into complex shaped objects.

- The highest temperature; 220°C heater surface temperature possible.
- By designing the pattern of resistance elements, we can realize the precisely even distribution of heat on heater surface.
- We can install all kinds of thermostats or thermo sensors anywhere you want.
